WORK EXPERIENCE

Docusign

Staff Machine Learning Engineer

Sept 2022 - Present

- Founding member of Docusign's AI organization; scaled the team from ~20 to 100+ engineers over 4 years by shaping technical direction, raising the hiring bar, and contributing to 100+ interviews and evaluations.
- Provided technical leadership for core Document AI capabilities behind the May 2024 launch of Intelligent Agreement Management (IAM), Docusign's strategic agreement AI platform. Drove architecture across inference services, asynchronous orchestration pipelines, recommender systems, APIs, vector storage, and conversational AI experiences.
- Designed and productionized NLP/LLM systems for agreement intelligence using RAG, semantic clustering, prompt orchestration, guardrails, and semantic drift analysis to improve precision, robustness, and trust in processing workflows.
- Led the architecture and implementation of ingestion and processing pipelines that handle 100M+ agreements annually, supporting 25k+ enterprise customers across 5+ global geographies with scalable, resilient, and high-throughput document AI infrastructure. Filed 2 U.S. patents covering novel agreement AI workflows and implementation methods, advancing Docusign's differentiated technical approach to agreement intelligence.

Microsoft Azure AI Search

Senior Software Engineer

June 2018 - Aug 2022

- Drove multiple critical initiatives for the highly strategic \$10B U.S. DoD JEDI program, a flagship cloud contract contested by major hyperscalers, spanning regional billing migration, telemetry obfuscation, zero-touch service buildout, DevOps tooling enhancements, and scalable alerting infrastructure.
- Led the architecture and delivery of a scalable, near-real-time, zero-touch secret rotation system for a fleet of 70k+ VMs, strengthening the security posture of a service operating across 30+ geographies with no downtime.
- Earned 2 promotions on the team, supporting organizational growth by interviewing, mentoring, and onboarding 5+ engineers.

Microsoft Azure Networking

Software Engineer

- Designed and scaled a continuous end-to-end integration testing framework for early Azure Networking feature validation, detecting 20+ potential large-scale outages pre-production and growing adoption to 100+ Azure teams across 50 regions for rollout safety and outage detection.

EDUCATION

University of California, Berkeley

M.S. Information and Data Science - 4.0 GPA

May 2024

Columbia University

M.S. Management Science and Engineering

May 2016

- Teaching Assistant - Python Based Data Analytics – Columbia Engineering
- Teaching Assistant - Service Operations Management – Columbia Business School

Manipal University, India

B.S. Computer Science and Engineering

May 2014

Miscellaneous

Microsoft SWE Intern

Summer 2015

- Designed and built a self-service web application to triage networking issues, automate diagnostics and configuration upgrades across router and switch SKUs, and reduce vendor tool dependency, saving tens of thousands of dollars.

Select Data Science Projects

2020 - Present

- Shapsum: A framework to Predict Text Summarization Quality
- Influence Maximization with Fairness at Scale using graph neural networks
- Spark ML airline delay classification on 30M data points
- Facial key points detection (Kaggle top 100)
